

Plant and Equipment

Our training courses combine classroom presentations with practical sessions to develop the candidates' knowledge, skill and confidence and provide both new and experienced operators with an understanding of safety awareness and risk assessment to reduce the likelihood of an accident occurring.

The awarding bodies that we operate under have many years experience in developing training courses to the highest of standards.

Our courses are delivered by registered Instructors, so you can be sure that you will be trained by people who are qualified and experienced with the relevant plant and machinery.

On- Site training at Stallingborough

We conduct on-site training at our premises in Stallingborough and our courses cater to small groups of approx. 3 candidates. A group of this size will ensure that each candidate receives the appropriate level of hands-on experience.

Training at customers own premises

We have the facility to train employees within their own working environment using their own equipment. We are happy to discuss the relevant requirements and devise a course to meet your needs and plan the training in accordance with your timetable.

The more popular plant courses are:

- Slinger/Banksman
- Teleporter
- Loading Shovel
- Gantry Crane
- Forklift Trucks
- Excavators/Dumper Trucks

This list is not exhaustive, and if you require training on different types of plant please do not hesitate to call and enquire.
